Drilling Record Sheets

Project: EL 7/68 Co-ords. Collar: Montezuma 47.5W/2.1E +0.3S Page 2 Drill: LY5

Hole No: Mzn 3 (DDH) Bearing: 225°T Bit Size:

R.L. Site: Line approx 2080'ASL Depression: 60° Core Size: NQ/BQ

Geologist: DK Sampler: Date Logged: 15/2/73 56.69

From m	To m	Length Run	Length Core	% Rec.	Sludge Wt.	No.	Assay Value	Summary Geological Log
26.21	29.26		3.61		25.19-26.08m ~~Quartzite light~~ grey fine grained, banded.			
29.26	30.79		1.50		~~26.08m-26.45m~~ Quartzose slate banded med. grey. 26.45-26.71m Breccia with quartzite and slate fragments disseminated and bands of pyrite.			
30.79	31.69		0.98		26.71-28.92m Slate, black, pods of pyrite occasional bands of quartzite and thin veins of carbonate (siderite? dolomite?)			
31.69	34.59		2.90					
34.59	34.75		0.12		28.92-29.95m Quartzite, medium grey fine grained.			
34.75	38.10		3.42		29.95-34.75m Slate, black quartzose bands distorted and broken, minor pyrite and siderite.			
38.10	44.42		6.40					
44.42	47.55		2.96		34.75-34.98 Quartzite, light grey with minor slate bands very minor pyrite mineralization.			
47.55	50.60		2.93		34.98-41.32m ~~Slate, black, minor pyrite.~~			
50.60	53.65		3.00		41.32-44.70m Slatey quartzite medium grey, minor pyrite and chalcopyrite. Quartz increases over interval to quartzite.			
53.65	56.69		3.89		44-70-46.97m Slate, black broken quartzite bands, stronger development of pyrite.			
56.69	59.74		2.69					
59.74	61.19		0.70
