MEMORANDUM

LOGGING OF CUNI DIAMOND DRILL CORE

Further to the memorandum of the 10th January, 1957, upon a discussion with Mr. K. Evans the situation is slightly changed.

On cross-checking between diamond drill records forwarded by the driller, and the geological log of core collected by myself and forwarded via Launceston, the core logged by me is not the entire core recovered and that the core logged is more strictly only a sample of the core recovered. This state applies for holes M7 to M12. The situation is not known for M13 but there is still no core for M6. The logs will have a note appended with this information on it.
