8th October, 1957

MEMORANDUM

G33 PLANT SMITHTON DISTRICT

It is noticeable that the driller on various occasions takes the day off because it is raining.

When I visited K. Harper in July, he discussed a suitable convenient shelter and requested several seven feet sheets of galvanized corrugated iron and suitable timber to make a shelter from wind and rain that could easily be set up on the weather side of the driller and helper while operating the plant.

I now make the suggestion that the materials be purchased and delivered by me on the next visit.

(K.L. Evans)

SUPERINTENDENT OF DRILLING

Mr. J.G. Symons,  
Director of Mines,  
Department of Mines,  
HOBART.
