University of Tasmania*

Western Tasmanian Regional Minerals Program
**Helicopter electromagnetic data —
processing, quality control and
interpretation**

James Reid
School of Earth Sciences, University of Tasmania

Contents

Acknowledgements	3
Part 1: Data acquisition and quality control.....	4
Part 2: Regional interpretation, Balfour area	18
Part 3: Regional interpretation, Meredith Granite.....	36
Part 4: Regional interpretation, Dolcoath Granite.....	56
Part 5: Regional overview, Mt Read Volcanics	74
References	91

Figures

Part 1:

1.1 Location map of WTRMP helicopter electromagnetic surveys	9
1.2 Meredith flight path map, showing lines flown with Birds 2 and 3.....	10
1.3 Mount Read Volcanics flight path map, showing lines flown with Birds 1, 2 and 3	11
1.4 Multiplot showing 880 Hz and TMI responses from Line 10131 of the Meredith survey	12
1.5 Multiplot showing 880 Hz and TMI responses from Line 10101 of the Meredith survey	12
1.6 Observed 7004 Hz, 880 Hz and radar altimeter data from Zeehan airstrip test flight 1	13
1.7 Differences between the 6600 Hz inphase response of the ground truth model and observed response for five Zeehan airstrip test flights	13
1.8 Inphase and quadrature residual responses for 34 kHz, 6600 Hz and 880 Hz HCP data from five test flights at Zeehan airstrip	14
1.9 Inphase and quadrature residual responses for 7004 Hz and 985 Hz VCX data from five test flights at Zeehan airstrip.....	15
1.10 Sengpiel sections calculated from (a) raw data from Zeehan test flight 1, (b) data from test flight 1 with bias corrections applied, (c) raw data from Zeehan test flight 5 and (d) test flight 5 data with bias corrections applied	16
1.11 Inphase and quadrature “zero” levels at 6600 Hz and 34 kHz, measured at high altitude during Flight 10, Mt Read Volcanics survey	17

Part 2:

2.1	Regional geology of the Balfour survey area	21
2.2	980Hz VCX apparent resistivity, Balfour area	22
2.3	HCP Ternary conductivity, Balfour area	23
2.4	WTRMP regional TMI with first vertical derivative enhancement, Balfour area	24
2.5	Ternary WTRMP regional ternary radiometrics, Balfour area	25
2.6	Balfour digital elevation model	26
2.7	Interpretation key, Balfour area	27
2.8	HEM interpretation, showing bedrock conductors and mineral deposits, Balfour area	28
2.9	Multiplot Line 10241, Balfour	29
2.10	Multiplot Line 10651, Balfour	30
2.11	Multiplot Line 10741, Balfour	31
2.12	Multiplot Line 11271, Balfour	32
2.13	EMFlow depth slice 20 m, Balfour area	33
2.14	EMFlow depth slice 70 m, Balfour area	34
2.15	EMFlow depth slice 120 m, Balfour area	35

Part 3:

3.1	Regional geology of the Meredith survey area	40
3.2	980Hz VCX apparent resistivity, Meredith area	41
3.3	HCP ternary conductivity, Meredith area	42
3.4	WTRMP Regional TMI with first vertical derivative enhancement, Meredith area	43
3.5	WTRMP regional ternary radiometrics, Meredith area	44
3.6	Meredith digital elevation model	45
3.7	980Hz VCX apparent resistivity with culture and mineral deposits, Meredith area	46
3.8	Interpretation key, Meredith	47
3.9	HEM interpretation summary diagram, Meredith area	48
3.10	Multiplot Line 10252, Meredith	49
3.11	Multiplot Line 10511, Meredith	50
3.12	Multiplot Line 11341, Meredith	51
3.13	Multiplot Line 11681, Meredith	52
3.14	EMFlow depth slice 20 m, Meredith area	53
3.15	EMFlow depth slice 70 m, Meredith area	54
3.16	EMFlow depth slice 120 m, Meredith area	55

Part 4:

4.1	Regional geology of the Dolcoath survey area	58
4.2	980Hz VCX apparent resistivity, Dolcoath area	59
4.3	HCP ternary conductivity, Dolcoath area	60
4.4	WTRMP regional TMI with first vertical derivative enhancement, Dolcoath area	61
4.5	WTRMP regional ternary radiometrics, Dolcoath area	62
4.6	Dolcoath digital elevation model	63
4.7	980Hz VCX apparent resistivity with culture and mineral deposits, Dolcoath area	64
4.8	Interpretation key, Dolcoath area	65
4.9	HEM Interpretation summary diagram, Dolcoath area	66
4.10	Multiplot Line 10211 Dolcoath area	67
4.11	Multiplot Line 10461, Dolcoath area	68
4.12	Multiplot Line 10711, Dolcoath area	69
4.13	Multiplot Line 10961, Dolcoath area	70
4.14	EMFlow depth slice 20 m, Dolcoath area	71
4.15	EMFlow depth slice 70 m, Dolcoath area	72
4.16	EMFlow depth slice 120 m, Dolcoath area	73

Part 5:

5.1	Regional geology of the Mt Read Volcanics survey area	77
5.2	980Hz VCX apparent resistivity, Mt Read Volcanics	78
5.3	HCP ternary conductivity, Mt Read Volcanics	79
5.4	WTRMP Regional TMI with first vertical derivative enhancement, Mt Read Volcanics area	80
5.5	WTRMP regional ternary radiometrics, Mt Read Volcanics area	81
5.6	Mt Read Volcanics digital elevation model	82
5.7	980Hz VCX apparent resistivity with culture and mineral deposits, Mt Read Volcanics	83
5.8	Interpretation key, Mt Read Volcanics	84
5.9	Multiplot Line 11101 Mt Read Volcanics	85
5.10	Multiplot Line 13562, Mt Read Volcanics	86
5.11	Multiplot Line 14621, Mt Read Volcanics	87
5.12	EMFlow depth slice 20 m, Mt Read Volcanics	88
5.13	EMFlow depth slice 70 m, Mt Read Volcanics	89
5.14	EMFlow depth slice 120 m, Mt Read Volcanics	90

Tables

1.1	Hummingbird system parameters	6
1.2	Response of the ground truth model for test flight 1	6
1.3	Computed inphase and quadrature biases for five test flights over Zeehan airstrip	7
1.4	Estimated levelling errors for WTRMP test flight data	7

Acknowledgements

This report is based on research carried out as part of a collaborative project between the University of Tasmania and Mineral Resources Tasmania, entitled 'An electromagnetic interpretation of west and north-west Tasmania'. Contributions to this report by the following people and organisations are gratefully acknowledged:

Bob Richardson, David Seymour, John Everard, Ken Bird and Chris Meech of Mineral Resources Tasmania; Anton Rada and Zoltan Beldi of Fugro Airborne Surveys; John Bishop of Mitre Geophysics Ltd; and Luisa D'Andrea, Darren Griggs, Andrew Fitzpatrick and Tony Collings of the University of Tasmania.
