

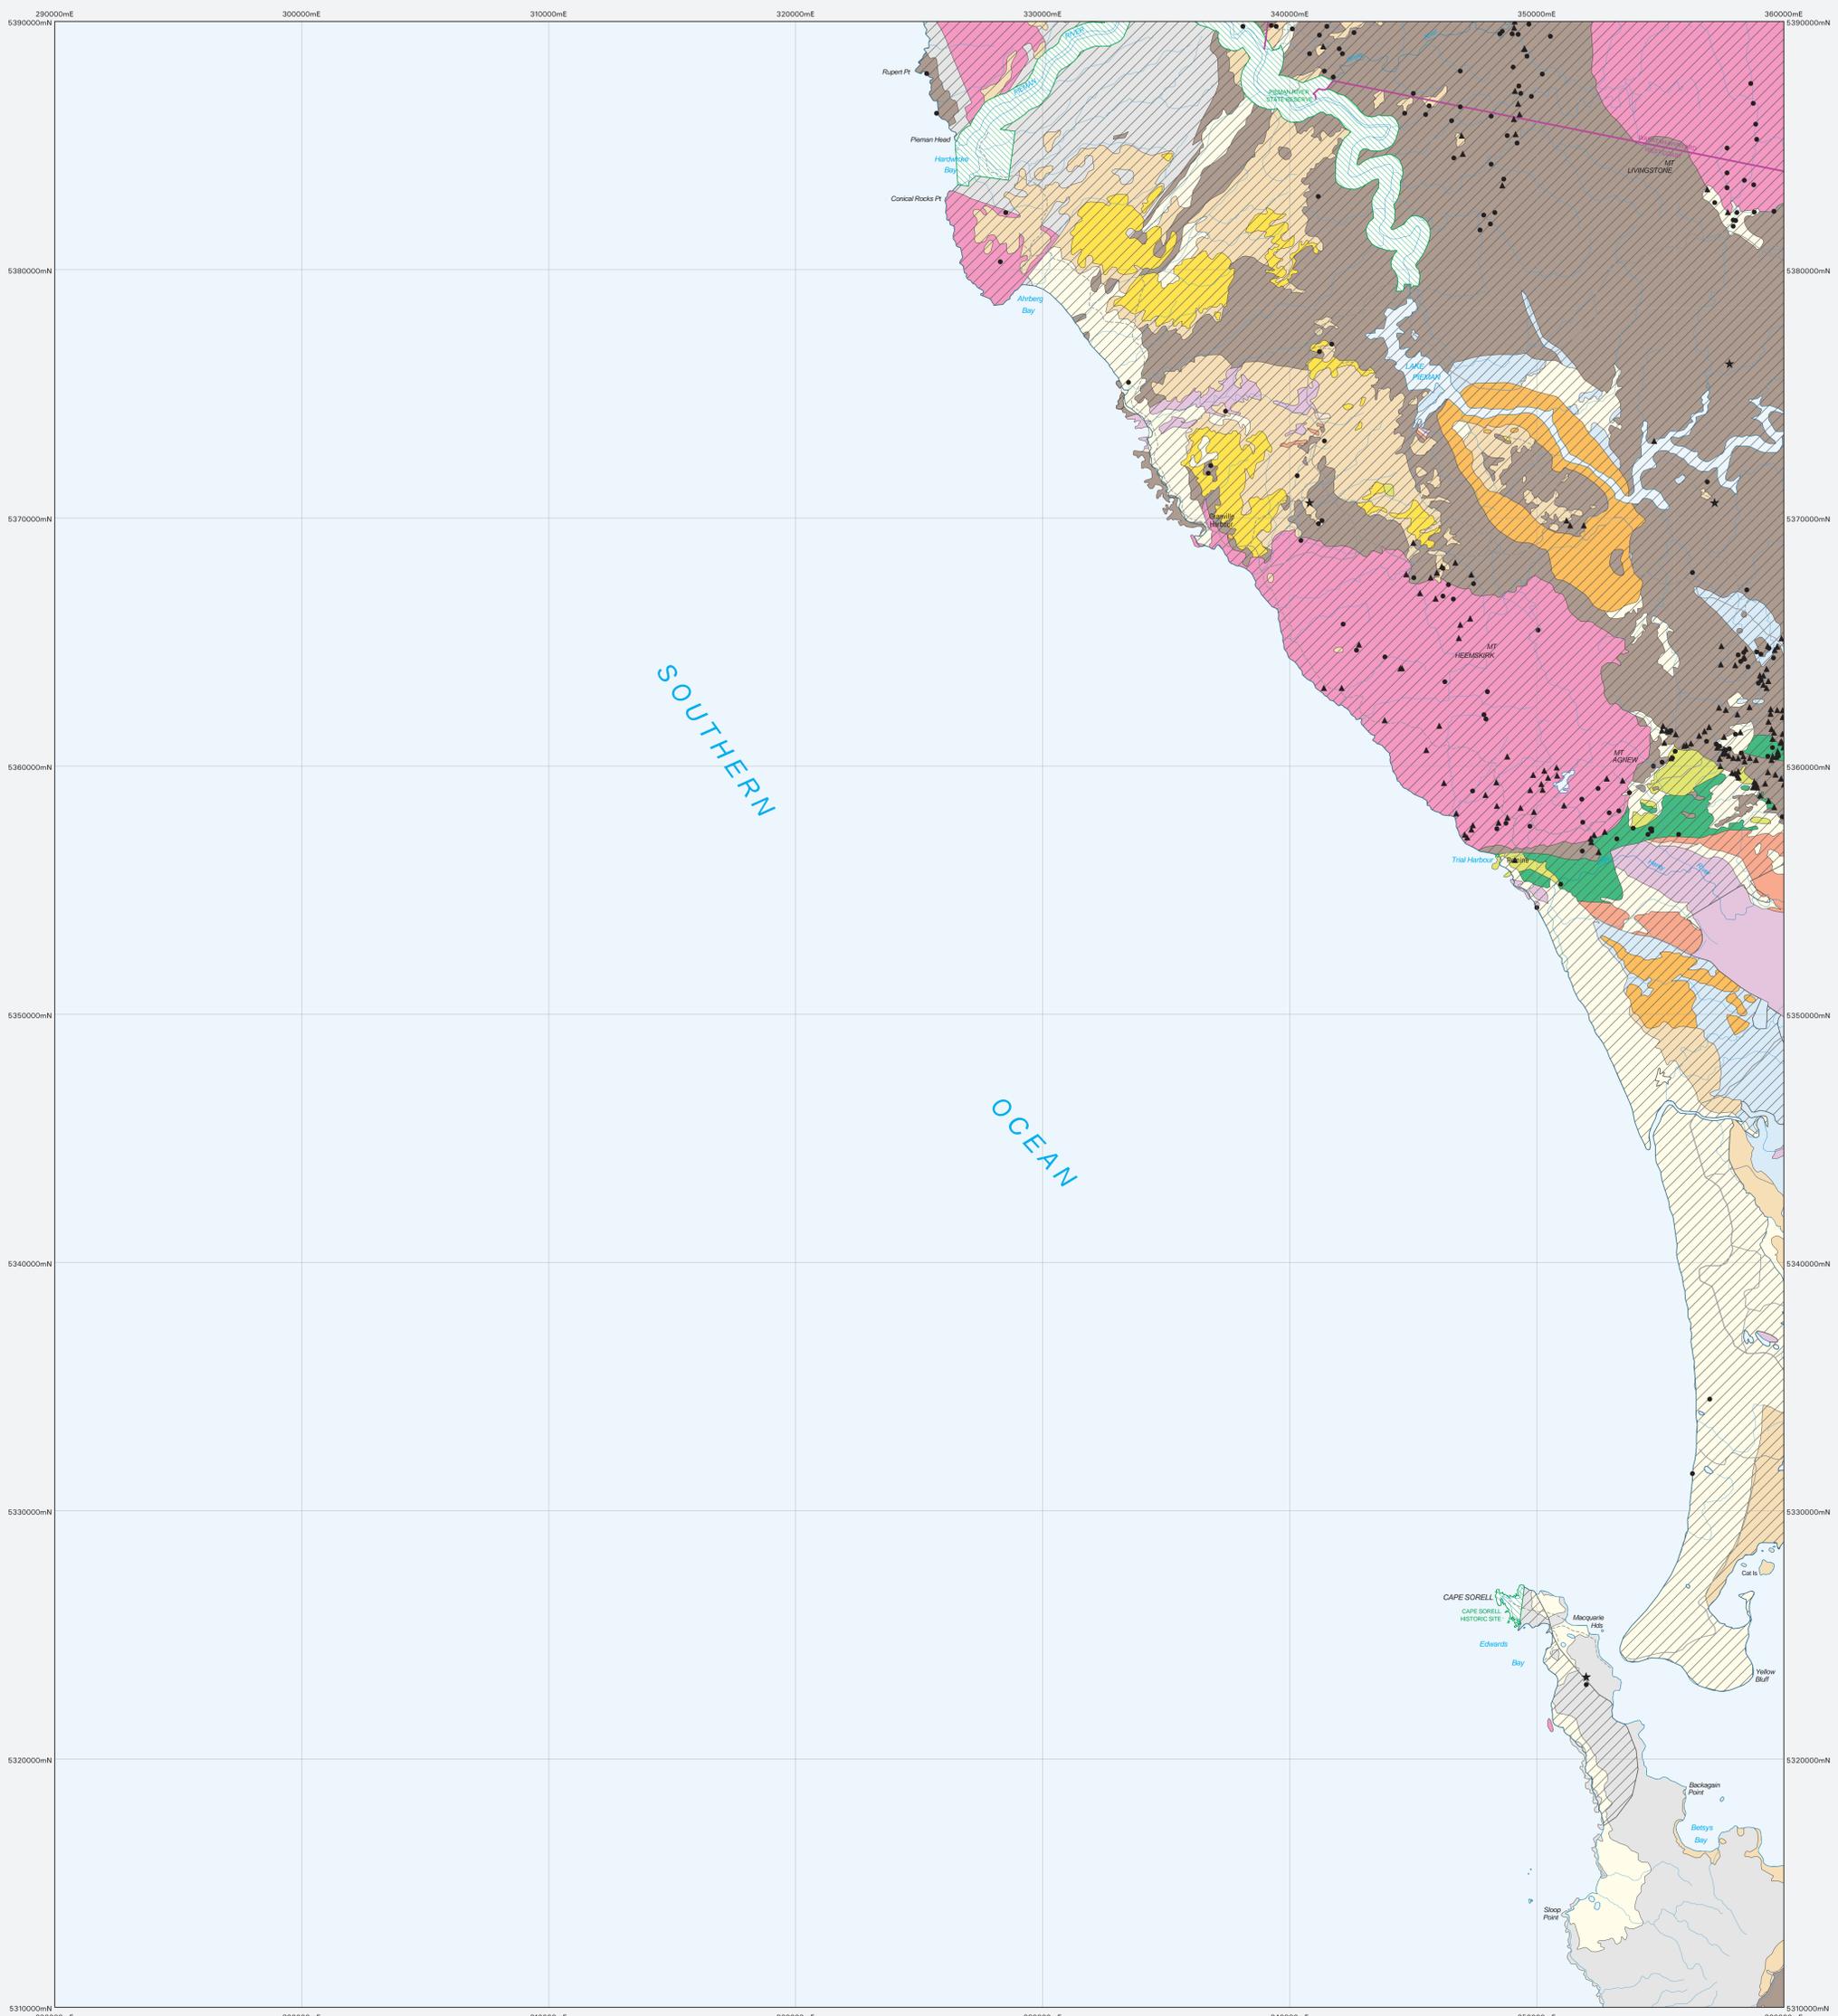

MAP 13A – SIMPLIFIED GEOLOGY AND AREAS OF HIGHEST MINERAL EXPLORATION AND MINING POTENTIAL

SOUTHERN

OCEAN

QUATERNARY 0 – 1.8 million years before present Gravel, sand, clay, mud and minor limestone.	TRIASSIC 205 – 251 million years before present Sandstone and mudstone, minor black coal, basalt and volcanic sediments.	LATE – MIDDLE CAMBRIAN 490 – 510 million years before present Folded, deformed and altered volcanic rocks of various compositions, and related intrusive igneous rocks, sandstone, siltstone and conglomerate (includes Mt Read Volcanics).
TERTIARY 1.8 – 65 million years before present Unconsolidated or cemented gravel, sand, silt and clay, minor limestone and brown coal. Basalt and related sediments.	PERMIAN – LATE CARBONIFEROUS 251 – 314 million years before present Mudstone, pabbly mudstone, sandstone and conglomerate, minor limestone, black coal and of shale.	MIDDLE – EARLY CAMBRIAN 510 – 545 million years before present Serpentine and greenstones. Deformed and metamorphosed volcanic and intrusive igneous rocks of ultra mafic and basaltic compositions, and associated sandstone, mudstone and chert.
CRETACEOUS 65 – 141 million years before present Intrusive and volcanic igneous rocks of various compositions (Cygnet and Cape Portland areas only).	EARLY CARBONIFEROUS – ORDOVICIAN 340 – 490 million years before present Granite and related intrusive and minor volcanic igneous rocks of various compositions. Folded and locally deformed sandstone, quartzite, siltstone, shale and slate, minor quartz veining.	NEOPROTEROZOIC 545 – 1000 million years before present Deformed and metamorphosed basaltic volcanic rocks and associated sandstone, siltstone, shale, dolomite, chert and schist.
JURASSIC 141 – 205 million years before present Dolerite.	ORDOVICIAN 434 – 490 million years before present Limestone and minor sandstone, siltstone and shale.	MESOPROTEROZOIC 1000 – 1600 million years before present Granite (King Island only). Deformed and metamorphosed quartzite, slate, siltstone, conglomerate, schist and dolomite.
	MIDDLE ORDOVICIAN – LATE CAMBRIAN 460 – 500 million years before present Folded and locally deformed conglomerate, sandstone, quartzite, siltstone and shale.	

Area of highly prospective rocks. These areas have a high potential for exploration and mine development, especially in the vicinity of existing mine sites and prospects, as indicated.
 Reserved land / Land unavailable for exploration and mining tenement application.
 Municipality boundary.
 Active Mine
 Abandoned Mine
 Prospect or Mineral Occurrence

THIS MAP SHOULD BE USED IN CONJUNCTION WITH MAP B – MINING LEASES AND ACTIVE MINES, PITS AND QUARRIES.

Scale: 1:100000
0 2 4 6 8 10km
AZGDE – AMG Zone 55
Contour Interval: 100 metres

The simplified geology for this map is derived from the 1:250000 digital geology of Tasmania.
Mineral potential data compiled by K. Morrison M Econ Geol. (based on Weighted Composite Mineral Potential information compiled for the Tasmanian Regional Forest Agreement).
Mineral deposit information derived from Mineral Resources Tasmania DEPOSITS data base. Data point position has not been verified in every case.
Digital base information from Land Information Services Division, Department of Primary Industries, Water and Environment.
Map produced by the Data Management Branch, Mineral Resources Tasmania using G.I.S. software.
