

HIBBS WEST

Scale: 1:25 000

COMPOSITE LEGEND FOR HIBBS EAST AND HIBBS WEST

PERIOD	UNIT	DESCRIPTION
CENOZOIC	Quhs	Modern shore face and associated aeolian dune sand (Quhs).
	Qhs	Stream alluvium, marsh and swamp deposits (Qhs).
	Qps	Older alluvial gravels, mainly on raised terraces developed on Tertiary deposits, and showing a probational relationship to younger alluvium (Qps).
TERTIARY	Tsmg	Semi-consolidated interbedded sands, pebble-cobble gravels (up to boulder grade in some places), silts and clays, some horizons contain coalified wood and rare amber (Tsmg).
	Ph	Marine sequence of grey, poorly sorted polymict cobble-pebble lithic conglomerate, pebbly lithic sandstone, siltstone, calcareous mudstone and limestone, with abundant marine macrofossils in some beds (Ph). (Correlates of lower Permian Supergroup).
PALAEOZOIC	3Dhw	Pale-weathering, cross-bedded, well-sorted marine quartz sandstone with minor siltstone and conglomerate; fossiliferous bed near top contains brachiopods, tentaculida and orthoconic cephalopods (3Dhw). (Whitehorse Beach Sandstone).
	3Dhr	Unfossiliferous redbed sequence of predominantly fine-grained lithic sandstone with subordinate coarse lithic sandstone and siltic conglomerate, arranged in thin-upward sequences (3Dhr). (Red Reef Cliff Sandstone).
	3Dh	Interbedded fossiliferous marine limestone and calcareous mudstone, with abundant coral heads up to 0.2m in diameter (3Dh). (Point Hibbs Formation).
		Possible disconformity.

PERIOD	UNIT	DESCRIPTION
LATE CAMBRIAN	Oi	Dark grey limestone, dolomite, calcareous mudstone, minor quartz sandstone and black clay weathering products; in part fossiliferous (Oi).
	Os	Grey to pink or reddish siliceous sandstone with subordinate granule-pebble conglomerate and minor siltstone. Cross-bedded in places, bioturbated in places. Oolitic fossiliferous at 367500mE 5259000mN north of this map sheet. Includes distinctive red cross-bedded sandstone sequence at Point Hibbs (Os).
EARLY CAMBRIAN	COms	Marine mudstone-siltstone-sandstone sequence, grey to reddish-grey, with Late Cambrian fossils at 364500mE 5298500mN north of this map sheet (COms).
		Unconformity
MIDDLE CAMBRIAN	Cdsv	Mixed sequence of volcano-sedimentary, sedimentary and volcanic rocks, ranging from felsic to andesitic in composition. May include non-volcanic sedimentary rocks (Cdsv).
	Cda	Andesitic lavas and breccias, with volcanoclastic units and possible intrusives. Typically plagioclase-pyroxene-phyric, includes some units mapped from aeromagnetic signature (Cda).
	Cdsvs	Dominantly volcanoclastic conglomerate-sandstone unit, typically felsic, with weakly positive magnetic character (Cdsvs).
	Cdsvh	Ridge-forming, probable sandstone units, typically non-magnetic (Cdsvh).
EARLY CAMBRIAN	Cdsh	Dominantly siltstone-mudstone sequence, grey to greenish-grey, thin-bedded, with subordinate thin graded turbidite sandstone units (Cdsh).
	Cdm	Dominantly intermediate volcanic rocks, including probable high-Mg andesites, and gabbro. Probably structurally emplaced (Cdm).
	Csu	Undifferentiated, generally coarse-grained ultramafic rocks, gabbro and sheared serpentinite (Csu).
PROTEROZOIC	Pon	Metamorphosed interbedded quartzite and mudstone/siltstone (Pon). Correlates of Oanh Formation.

PERIOD	UNIT	DESCRIPTION
MESOZOIC	Jd	Dolerite (Jd).
	Epb	Andesitic intrusive rocks, including plagioclase-pyroxene-phyric diorite and granodiorite (Epb).
MIDDLE CAMBRIAN	Edb	Andesitic lavas and breccias and possible intrusives (Edb).
	Egp	Gabbro dykes, intrusive bodies and fault bounded units (Egp).
EARLY CAMBRIAN	Cdm	Dominantly intermediate volcanic rocks and gabbro, including probable high-Mg andesites (Cdm).
	Csu	Undifferentiated, generally coarse-grained ultramafic rocks, gabbro and sheared serpentinite (Csu).

SYMBOL	DESCRIPTION
—	Geological boundary - position accurate or approximate.
- - -	Geological boundary - inferred.
- · - · -	Geological boundary inferred from airborne magnetic and/or radiometric data.
- - - - -	Fault - unspecified type, position accurate or approximate.
- · - · -	Fault - unspecified type, inferred.
- · - · -	Fault - unspecified type, concealed.
- · - · -	Fault - unspecified type, inferred from airborne magnetic and/or radiometric data.
- · - · -	Fault - unspecified type, concealed, inferred from airborne magnetic and/or radiometric data.
- · - · -	Thrust fault, position accurate or approximate, teeth on upper plate.
- · - · -	Thrust fault, inferred, teeth on upper plate.
- · - · -	Thrust fault, concealed, teeth on upper plate.
- · - · -	Lithological trend line.
(white line)	Limit of mapping of sub-unit within undifferentiated rock unit.
