

NOTE: Due to the speed of operation of the various Shoran units the position of the vessel during reflection recording was read every fourth shotpoint and these read positions were annotated with the normal sequence of numbers with the suffix A. The intermediate shotpoints were identified by the suffixes B, C and D for recording purposes. During processing and location map preparation each shotpoint was accorded its own number and thus a line; e.g., NEF-1 which was recorded with shotpoint number 1A-39D is identified by shotpoint numbers 1-156 on the location map and final seismic sections.
