

The final sections were displayed on film in the Variable Area/Wiggle Trace format with 10% bias. The vertical scale was 3.75 inches per second. The horizontal scale was approximately one inch equals 0.375 miles (24 traces/inch). The top of each section was labelled with shotpoints, velocities, water depths and line intersections along with all pertinent field and processing information for ready reference.

Respectfully submitted,
GEOPHYSICAL SERVICE INTERNATIONAL

D. J. Kayson
