

VI. GENERAL INFORMATION (continued)

- G. Shoran Range Extension (XR) equipment was provided by ONI for this survey.
- H. The Shoran base station equipment was checked for proper calibration prior to the commencement of the survey by use of a range calibration between the Base Stations Mount Richmond (Mobile Station) and Mount Warrnambool (Base Station). The Shoran base station equipment was adjusted to read the computed range of 71.902 miles, as instructed by GSI.
- I. The Shoran mobile indicating unit was checked on every seismic line during the operation for proper zero set. Zero check set was accomplished at 99.808 (short path) miles.
- J. ONI provided the following peripheral equipment for this survey:

Pulse Follower

Digital Printer

Digital Track Plotter

Dual Antenna System
