

Figure 7 — Diagrammatic cross-section constructed along line A-A' of Figure 5.

CONCLUSIONS

Northeastern Tasmania was the major sediment source for the Eastern View Coal Measures of the southeastern sector of the Bass Basin. The near-source poorly sorted conglomerates of the Boobyalla Sub-basin represent the most proximal facies of the Eastern View Coal Measures and reflect local derivation. Biostratigraphic subdivisions in Durroon 1 can be recognised in the Boobyalla Sub-basin.

The Boobyalla Sub-basin is the onshore continuation of the Bass Basin.

ACKNOWLEDGEMENTS

Weaver Oil and Gas Corporation Australia are thanked for access to proprietary data. Drs N. Farmer and E. Williams and Mr I. B. Jennings are thanked for useful discussions and critical reading of the manuscript. This paper is published with permission of the Director of Mines, Tasmania.
