

"227" Lead T-16-P

The "227" lead is recognized on two seismic lines which have been reprocessed by GSI for the Bureau of Mineral Resources. These reprocessed lines are HB-75A-222, a strike line, and HB-75A-227, a dip line. This lead appears to be of the same general description, and is located to the east of the "81-21" prospect on Permit T-16-P.

Additional seismic data acquisition is planned in order to better define the potential of this lead.
