

Spring Graben -1 prospect is located on seismic line BB85-28 at s.p. 558 (enclosure 11) and close to a strike line BB85-23 (enclosure 12).

The Bark Graben and the Dump Graben leads are similar types to the Spring Graben anomaly. Northern closure of the Bark Graben lead is in the T-16-P permit and the Southern closure is in the T-15-P permit.

Both leads need additional seismic to upgrade them to drillable prospects.
