

**VII CONCLUSIONS AND RECOMMENDATIONS**

Exploration in the T-15/16-P permits should be continued in accordance with the results of the recent interpretation carried out by Bridge in 1985.

To upgrade the three new playtypes and seven new prospects and leads associated with them, which are elaborated in this report, some 800-1,000 km of additional seismic data is recommended (see figure 12 and enclosure 5).

Since the "conventional" approach has not proved successful in these permits, as substantiated by four dry holes (Durroon -1, Squid -1, T. Devil -1 and Chat -1), it is recommended that further drilling should test prospects such as Spring Graben, Tamar, Lily etc.
