vi(a) FATHOMETER DISCUSSION

At a 50 shotpoint interval an event mark was logged to the fathometer strip chart with the relevant shotpoint number and water depth annotated alongside the mark. On any occasion where it became necessary to change the fathometer scale the shotpoint number and new scale would be annotated on the chart.

The fathometer was operational for all recorded seismic lines. Plate number 9, appended to this report, depicts all available scales on the Simrad EA.
