

		and Coal.
2139 - 2142	50	Coal: As above.
	20	Shale: As above.
	30	Claystone: As above.
2142 - 2145	10	Coal: As above.
	30	Shale: As above.
	60	Siltstone: Off white, argillaceous, micromicaceous, soft, sticky, dispersive.
2145 - 2148	10	Coal: As above.
	30	Shale: As above.
	50	Siltstone: As above.
	10	Sandstone: As above, coarse to very coarse, clean.
2148 - 2151	40	Claystone: As above.
	10	Coal: As above, very argillaceous, grading to Carbonaceous Shale.
	20	Shale: As above.
	30	Sandstone: As above, very fine to granules, very poorly sorted, subround to angular, friable to loose, fair porosity, no show, no cut.
2151 - 2154	10	Coal: As above.
	10	Shale: As above.
	10	Sandstone: Light brown, granules to very coarse, moderately sorted, subround, loose, unconsolidated, trace pyrite nodules, fair porosity, no show, no cut.
	70	Claystone: Off white to light brown, non calcareous, soft, dispersive, micromicaceous.
	Tr	Tuff: Pale green, silky lustre, translucent, trace very fine quartz grains, soft to firm, dispersive.
2154 - 2157	10	Shale: As above.
	30	Siltstone: Light brown, argillaceous, micromicaceous, non calcareous, soft, dispersive.
	30	Claystone: As above.
	30	Sandstone: As above, also fine to medium grained.
2157 - 2160	90	Sandstone: Colourless, translucent, very fine to fine, well sorted, subround to round, spherical, loose unconsolidated quartz, trace white clay matrix, fair to good porosity, no show, no cut.
	10	Claystone: As above.
2160 - 2163	30	Sandstone: As above, white to light brown, friable in aggregates, abundant clay matrix, pyrite cemented nodules in part, trace to nil porosity, no show, no cut.
	10	Shale: Dark grey to brown, micromicaceous, non calcareous, firm, fissile.
	20	Siltstone: Off white to light brown, argillaceous, micromicaceous, non
