

MRC9304011-ACM

920 - 930	80	Claystone: As above, very shelly and calcareous.
	20	Limestone: Light grey, to light brownish grey, microcrystalline, calcarenite, ankeritic, slightly to moderately argillaceous, trace glauconite, hard, no porosity, no show.
930 - 950	80	Claystone: As above, very shelly, grading to a marl.
	20	Limestone: As above.
950 - 960	90	Claystone: As above.
	10	Limestone: As above.
960 - 980	100	Claystone: Light grey to light brown, slightly to very calcareous, shelly in part, trace glauconite, trace pyrite, soft, soluble.
980 - 990	100	Claystone: As above.
990 - 1000	90	Claystone: As above.
	10	Limestone: As above.
1000 - 1020	100	Claystone: As above, very shelly. Collected after losing circulation at 1017m due to the hole packing off.
1020 - 1030	100	Claystone: As above, generally only non to slightly calcareous but very fossiliferous.
1030 - 1040	100	Claystone: As above, becoming brown in part, non to slightly calcareous.
	Tr	Dolomite: Tan, very finely microcrystalline, slightly argillaceous, very hard.
1040 - 1050	10	Claystone: As above.
	90	Sandstone: Colourless, translucent to transparent, fine to coarse grained, predominantly medium grained, subangular to well rounded, good sphericity, moderately sorted, trace calcareous cement, clean, trace glauconite, friable to unconsolidated, good inferred porosity, no show.
1050 - 1060	90	Sandstone: As above.
	10	Claystone: Brown to dark brown, non calcareous, carbonaceous, slightly silty, soft, very soluble.
1060 - 1070	80	Claystone: As above, trace pyrite nodules.
	20	Sandstone: As above, becoming very coarse grained in part, poorly sorted.
1070 - 1080	70	Claystone: As above.
	30	Sandstone: As above, probably cavings.
1080 - 1090	90	Claystone: As above, slightly glauconitic in part, very silty in part.
	10	Sandstone: As above.
1090 - 1100	90	Claystone: As above.
	10	Sandstone: As above.
1100 - 1110	100	Claystone: Dark brown, silty, non calcareous, micromicaceous in part, trace glauconite, carbonaceous, trace pyrite nodules, soft, very soluble.
