

MRC9304011-ACM

- 1446 - 1449 100 Sandstone: Colourless, very fine to medium, predominantly fine, subround to round, occasionally subangular, moderate to good sphericity, moderate to good sorting, unconsolidated, trace mica, trace carbonaceous specks, good inferred porosity, no show.
- 1449 - 1452 100 Sandstone: As above, coarse to predominantly fine, trace carbonaceous specks, good inferred porosity, no show.
- 1452 - 1455 100 Sandstone: As above, very fine to coarse, predominantly fine, good inferred porosity, **FLUORESCENCE** trace pinpoint moderate bright yellow white, trace cut.
- 1455 - 1458 100 Sandstone: As above, very fine to coarse, predominantly fine, trace pyrite, good inferred porosity, **FLUORESCENCE** trace pinpoint as above.
- 1458 - 1461 100 Sandstone: As above, very fine to coarse, occasionally very coarse, predominantly fine, good inferred porosity, **FLUORESCENCE** 50% moderately bright yellow white, trace milky cut.
- 1461 - 1464 100 Sandstone: As above, very fine to coarse, occasionally very coarse, predominantly fine, good inferred porosity, **FLUORESCENCE** trace as above.
- 1464 - 1467 100 Sandstone: Colourless, very fine to very coarse, very poorly sorted, subrounded to rounded, occasionally subangular, good sphericity, clean, unconsolidated quartz, trace mica, trace carbonaceous specks, good inferred porosity, no show.
- 1467 - 1470 100 Sandstone: as above, predominantly fine, moderately sorted, clean, trace mica, good inferred porosity, no show.
- 1470 - 1473 100 Sandstone: colourless, very coarse to fine, subangular to rounded, predominantly fine to medium, poor to moderately sorted, unconsolidated loose quartz, trace carbonaceous specks, good inferred porosity, no show.
- 1473 - 1476 90 Sandstone: As above, very fine to very coarse, predominantly very fine to medium, moderately to poorly sorted, predominantly subangular to angular, well rounded when very coarse, loose unconsolidated quartz, trace mica, good inferred porosity, no show.
10 Coal: Black to brown black, dull, firm, blocky to angular.
- 1476 - 1479 100 Sandstone: Colourless, fine to very coarse, angular to well rounded with increasing grain size, poorly sorted, spherical, loose, unconsolidated, quartz, clean, trace mica, good inferred porosity, no show.
Tr Coal.
- 1479 - 1482 100 Sandstone: As above, becoming generally more angular, no show.
- 1482 - 1485 80 Sandstone: As above.
10 Coal: Black to brown black, dull, platy, firm.
10 Claystone: Off white to light grey, very soft, dispersive, micromicaceous, carbonaceous specks.
