

1767 - 1770	40	Claystone: As above.
	40	Sandstone: Colourless, translucent, very fine to fine and medium to coarse, bimodal, subround to subangular, well sorted, friable to loose clean quartz, weak siliceous cement, trace mica, fair inferred porosity, no show.
	20	Coal: Black, dull, firm to hard, blocky, sub-bituminous.
1770 - 1773	80	Sandstone: As above, very fine to medium, occasionally coarse to very coarse, very poorly sorted, loose unconsolidated quartz, no show.
	20	Claystone: As above.
	Tr	Coal: As above.
1773 - 1776	60	Sandstone: Colourless, translucent, predominantly very fine to fine, occasionally medium and coarse, moderately sorted, subangular to subround, weak siliceous cement, trace clay matrix, trace mica and feldspar, friable to predominantly loose quartz, good to fair inferred porosity, no show.
	30	Claystone: As above.
	10	Coal: As above.
1776 - 1779	90	Sandstone: As above, very fine to medium, moderately sorted, loose unconsolidated quartz, good inferred porosity, no show.
	10	Claystone: As above.
1779 - 1782	70	Sandstone: As above, fine to medium, well sorted, clean loose quartz, good porosity, no show.
	20	Claystone: As above.
	10	Coal: Black, dull, firm to hard, angular, brittle.
1782 - 1785	100	Sandstone: As above, fine to medium, angular to predominantly subround, well sorted, clean loose quartz, good inferred porosity, no show.
1785 - 1788	100	Sandstone: As above, predominantly fine grained, subangular to subround, trace clay matrix, loose unconsolidated quartz, good inferred porosity, no show.
1788 - 1791	80	Sandstone: As above, fine to coarse, moderately to poorly sorted, trace matrix, loose unconsolidated quartz, good inferred porosity, no show.
	20	Claystone: Light grey brown, micromicaceous, laminated, carbonaceous streaks, soft to firm, subfissile.
1791 - 1794	60	Sandstone: As above, but very fine to very coarse, very poorly sorted, subround to round, occasionally angular to subangular, loose, unconsolidated clean quartz, good porosity, no show.
	30	Claystone: Off white to light brown, micromicaceous, silty in part, carbonaceous specks, soft, dispersive.
	10	Coal: Black, dull, firm to hard, brittle.
1794 - 1797	60	Sandstone: As above, but very fine to very coarse, very poorly sorted, subround to round, occasionally angular to subangular, loose, unconsolidated clean quartz, good porosity, no show.
	40	Claystone: As above.
	Tr	Coal: As above.
