

- 7057-7215      Shale with minor sandstone.  
Shale; dark grey to dark grey-brown, in part silty, sparsely micaceous.  
Shale; light grey as above.  
Sandstone; light grey, silty, fine to very fine grained, as for interval 5589-7057.
- 7057-7830      Interbedded sandstone, siltstone and shale.  
The sandstones are the same as for interval 5589-7057, except for a greater abundance of feldspar, occurring as sub-rounded to euhedral grains, completely replaced by clay, and lithic grains and pebbles, principally dark grey shale, light grey quartzite and buff to green volcanics.  
Siltstone; light brown to light grey, argillaceous in part, very finely sandy, sparsely micaceous, pyritic and carbonaceous.  
Shale; light to mid-grey, in part silty, sparsely micaceous.
- 7830-7978      Interbedded quartzite and recrystallized siltstone and fine grained sandstone and black metamorphosed shale.
