

Core No. 10 (5900-5910) Rec. 9 ft.

Altered tuffaceous mudstone: medium greyish blue-green, dense, faintly banded by silty streaks (dip $5^{\circ}\pm$). Highly fractured with common vertical fractures filled by soft, white, non-calcareous mineral which also is common along bedding planes. Hydrothermally altered (zones of mottled light green) and commonly pyritic. No OSCF.
