

Daily Report 3rd November

Surround NO 1.

Present depth 6200'

Run logs at this depth.

Lithology

Dark grey slate & mudstone
interbedded grey fine to medium grain
sandstone. Towards the bottom of
the hole (last 340') the sands were
slaty & carbonaceous & contained quartz
& slate pebbles.

Run FIT at about current depth to
determine pressure but test thought to be
unsuccessful

The hole is considered to be a lower
barotaxis from about 4500'.

Expected to take some side wall cores
before continuing.

Future of hole & forward drilling
programme uncertain.
