

Daily Report 362061 6<sup>th</sup> November

TIEC ~~000~~ Surroon / Feld 18h

Present depth 7000'

Drilling ahead in lower  
bituminous shaly type sediments,  
fine, silty & sand & odd  
coaly streaks. No shows  
& not very promising.

plan to core in next good  
sandstone if they get one

Some drilling problems, transfer of  
drill time but recovered ok. Not  
thought to be out of alignment.
