

(ii) Coring:

Core No.	Interval Cored (feet below K.B.)	Footage Cut	Recovery (feet)	Recovery (%)
1	7393 - 7423	30	27	90

Specific samples were waxed and sent to the Bureau of Mineral Resources for core analysis (see Appendix 3 for results). The remainder was slabbed into thirds; one-third sent to the B.M.R., one third to the Tasmanian Mines Department and one-third retained by Hematite Petroleum. For full descriptions see Appendix 2.

(iii) Sidewall Sampling:

60 Sidewall Cores were shot by Schlumberger of which 58 were recovered. The material was retained by Hematite for palynological and micropalaeontological processing. For full description see Appendix 2.
