

zone, rare specimens were identified in the Middle *N. asperus* and Upper *M. diversus* zones and in the Middle *M. diversus* zone above 9000 feet. Recycled spore-pollen, generally Permian species, occur consistently in the *N. asperus* zones and sporadically in the Middle and Lower *M. diversus* zones. The palynological sequences in Narimba-1 appears most similar to that in Pelican-2.
