

PELICAN #1

S. J. Burns

21.3.70

- 900 - 950 20% Lst. (calcarenite); 80% fossil frags. of coral, bryozoa
- 950 - 970 80% Lst. (calcarenite) - coquina; shelly frags of bryozoa, coral, gastropods, bivalves; 20% cement
- 970 - 1010 100% Lst. as above. Frags mainly bryozoa, white and grey varieties. Minor cement
- 1010 - 1050 100% Lst. as above. Quite large, well-preserved frags., some forams
- 1060 - 1090 100% Lst. as above. Rare brown oxidised quartz grains.
- 1090 - 1130 100% Lst. Rare glauconite grains. Forams often greenish
- 1130 - 1170 100% Lst. as above. Glauconitic forams.
- 1170 - 1210 100% Lst. as above. Frags mainly of bryozoa (white and grey). Forams greenish
- 1210 - 1250 100% Lst. as above.
- 1250 - 1290 100% Lst. as above; forams more abundant. 5-10% of sample mainly white and non-glauconitic. Few minor flakes of clear calcite (secondary).
- 1290 - 1350 100% Lst. as above; forams less abundant. Little or no glauconite. Some very large bivalve fragments.
