

9283	1"	Shale	very dark brown, highly carbonaceous grades to lignite numerous coal-black bituminous streaks and laminae.
9300	½"	Siltstone	medium brown-greyish, very argillaceous grades to silty-sandy shale, carbonaceous.
9311	½"	Shale	very dark grey-brown, carbonaceous, trace coaly laminae-horizontal.
9319	¼"	Sandstone	light grey, fine-very fine grained, less clayey appearing, subrounded-subangular quartz and feldspar. Trace shale, laminae - horizontal. Tight - poor vis. porosity. No show.
9355	1"	Sandstone	buff very fine-fine grained silty to <u>clayey</u> in part, subrounded, soft-friable. Only poor vis. porosity. No shows.
9400	½"	Shale	very dark brown, carbonaceous, trace black coal stringers and lenses.
9415	¾"	Sandstone	buff-light grey, fine grained, subrounded-subangular, moderately sorted, some clay choking, abundant coal and dark brown carbonaceous shale laminae. Poor-Fair vi's. porosity. Trace scattered pale yellow fluorescence.
9440	¼"	Mudstone	light grey. Poor sample.
9456	½"	Sandstone	buff fine-medium grained, angular subrounded, quartz and feldspar - clay choking in part. Poor vis. porosity, trace oil stain. Trace pale blue fluorescence.
9482	½"	Sandstone	light grey-buff, fine-medium grained, subrounded subangular quartz, some clay choking, abundant coal laminae. Poor vis. porosity, trace dead oil stain, fair pale yellow patchy fluorescence.
9507	½"	Shale	very dark brown, carbonaceous.
9605	½"	Siltstone	light grey-brown, hard indurated and soft in part, very slight calcareous, trace carbonaceous argillaceous flecks.
9620	½"	Claystone	light grey, silty, trace carbonaceous flecks.
9685	1"	Sandstone	light grey-buff, fine grained, trace medium-silty, subrounded-subangular, moderately sorted, some clay choking, thick claystone laminae. Poor vis. porosity. Fair patchy fluorescence. Trace faint oil stain.
9717	½"	Sandstone	buff light grey as below friable. Tight. No show.
9788	½"	Sandstone	buff fine very fine grained, silty-clayey, subrounded-subangular quartz and feldspar (possibly predominant) to carbonaceous debris and coal flecks. Tight. No show.
9957	1½"	Coal	black, bituminous, blocky.
9982	½"	Siltstone	medium grey, argillaceous, indurated, trace sandy very fine-fine horizontal laminae. Tight. Trace scattered fluorescence.
10,009	½"	Shale	very dark brown, carbonaceous (possibly lignite).
10,028	½"	Sandstone	light grey, very fine grained - silty, trace fine grained, subrounded, essentially as below, clay choking, faint horizontal laminae. Trace micaceous? Tight. No show.
