

f) Logging

Four separate logging runs were made by Schlumberger. The first was made at 872 m (2861') prior to setting 13 3/8" casing, two intermediate runs were made at 2557 m (8359') and 2869 m (9413'), and a final run was made after reaching T.D. at 3051 m (10,009').

Details of all logging operations performed on this well are listed in the following Logging Summary (Table 6).

A Schlumberger Computer Processed Interpretation was done for the interval 2652 m (8780') to T.D. (Enclosure 1).
