

VELOCITY SURVEY

The velocity survey was carried out by Velocity Data Pty. Limited. Shots were recorded at five levels while running in the hole to the deepest level reached (3048 m (10,000')).

Pulling out of the hole readings were repeated at one earlier level and taken at fifteen new levels, making twenty-one levels in all. At least two records were made at each level. The results are shown on the following table and graph. (Table 7, Fig. 5)
