

PLATE 1: 2322-2331 m Reflected Light
 This band of resinite (brown) containing sclerotinite (white; open cell lumens) occurs in a vitrinite (white top) rich coal.
 Field Dimensions 0.26 mm x 0.18 mm

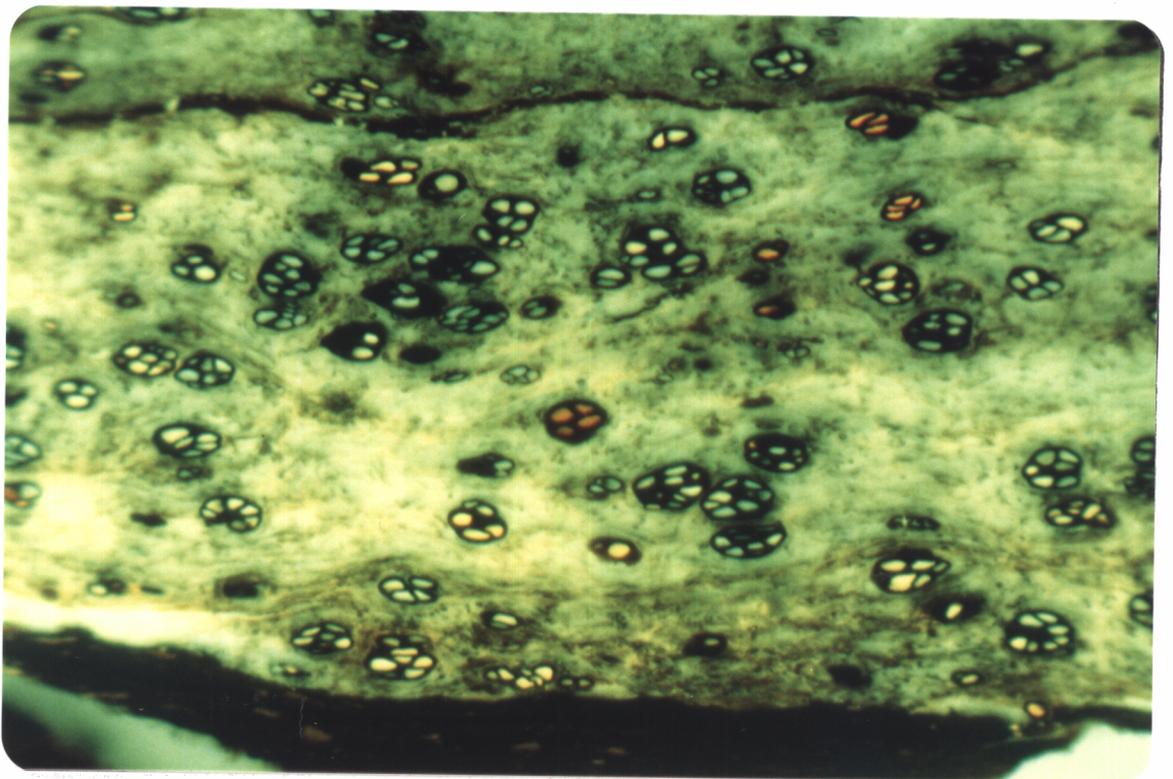

PLATE 2: 2322-2331 m Fluorescence Mode
 Same f.o.v. as Plate 1 showing the variable fluorescence of the resinite and exsudatinite (filling the cell lumens of the sclerotinite) also with variable fluorescence.
