

PLATE 8: 4104-4113 m Reflected Light
 This Cretaceous shale is rich in micrinitised (white specks),
 bituminite (brown).
 Field Dimensions 0.26 mm x 0.18 mm

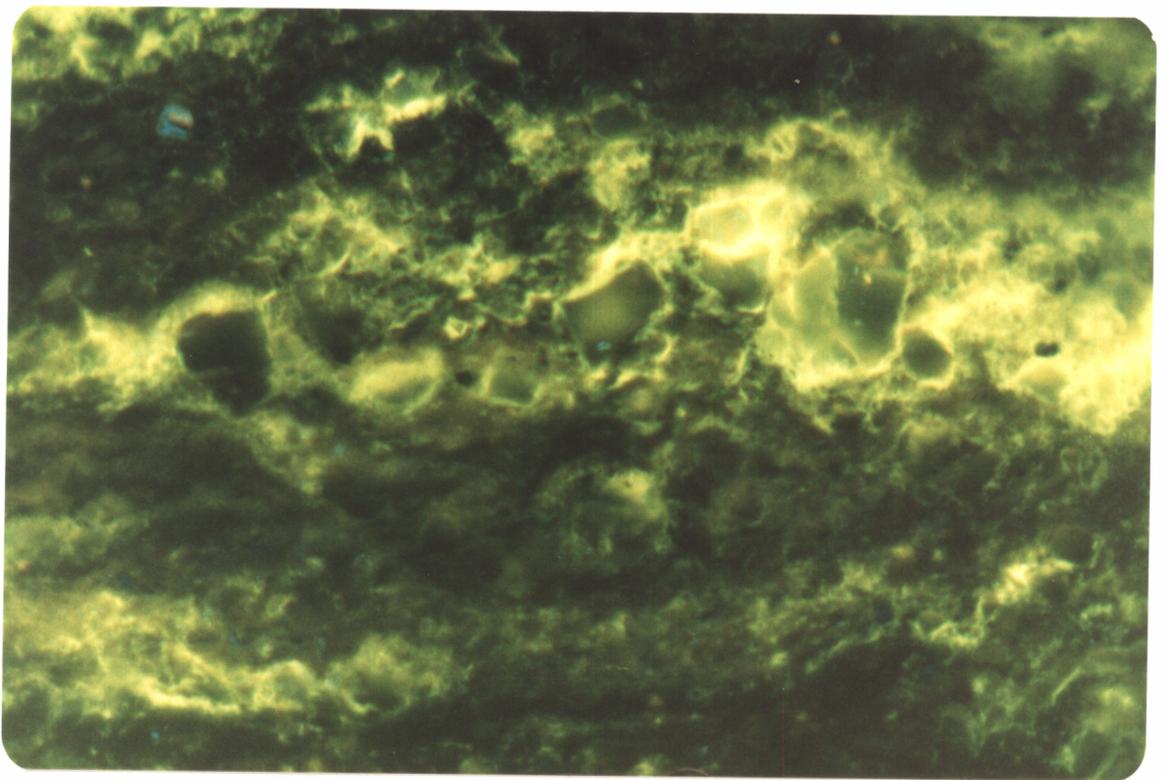

PLATE 9: 4104-4113 m Fluorescence Mode
 Same f.o.v. as Plate 8 showing intensely fluorescing oil
 associated with the larger mineral grains and the lack of
 fluorescence of the bituminite (black).
