

Unit 5

The base of unit 5 is also defined by palynological data being the boundary between the lower *L.balmei* and *T.longus* zones. Wireline correlation of this surface is not possible given the limited well control.

Unit 5 includes the lower and upper *L.balmei* zones and is entirely Palaeocene in age.

Unit 6

Unit 6 has been only partially penetrated at Pelican 5 and Poonboon 1 within T/25P. Sediments in these wells belong to the *T.longus* and *T.lillie* palynological zones. The base of Unit 6 has not been defined in T/25P.
