

Tap Oil T/47P 3D PSTM

3D binning, data regularization and bin centering
Far Offset 5020

Processing Flow

- **Reformat**
- **Navigation merge**
- **Trace edit**
- **Low cut filter 3Hz 18dB**
- **Deterministic de-phase filter to convert data to zero phase using far field signature**
- **Resample to 4ms using AA filter 110Hz 96dB**
- **System delay correction**
- **Spherical divergence correction $V*V*T$ using regional velocity**
- **Swell noise attenuation, threshold 2.25 and despiking; threshold 2.0**
- **Linear noise attenuation, Velocity -2500m/s to 2500m/s**
- **Tidal static correction**
- **Tau-P de-convolution, operator length 280 and gap 24ms**
- **First pass velocity analysis on 1km x 1km grid**
- **NMO with QC'ed velocity**
- **Alternate trace drop with K – filter**
- **Interpolate one trace in cdp domain**
- **High resolution radon demultiple**
- **Remove the interpolated trace**
- **Channel Scaling**
- **Post radon despiking**
- **Post radon linear noise attenuation**
- **3D binning 12.5 X 25 m grid**
- **Fold regularization and bin centering (RALFT3D)**

Fold map – 3D binned data **before** trace interpolation
