

Figure 6. CSAMT Anomaly (1024Hz), alteration zonation and geology, Level Plan 100mRL. (Legend as for Figure 3).

DHEM

Results and Modelling Reports of DHEM surveys are located in Appendix 3.

Outer Rim Exploration were contracted to complete the DHEM surveys using the Crone PEM three component downhole system.

After preliminary study of the existing DHEM data by Mike Asten in 1999, it was concluded that additional information could be gained by resurveying some holes with different loop configurations.
