 Mr D. Burgess,
 Registrar of Mines,

21st November 2001

EXPLORATION LICENCE 41/ 97

Dear Sir,
 As my final report for the EL ,I should like to offer the following information.

The large blocks I removed from the area were taken from alongside existing roads. No new excavations were undertaken.

The smaller blocks were taken by using a crane mounted on a light four wheel drive vehicle. Access to all areas was carried out without the need to construct any road.

The primary exploration was carried out on foot, samples were removed and carried out. None of these methods require any earthworks and therefore no rehab work is required.

The sawing and polishing of samples was carried out at my Prospect factory. Many of the samples have been discarded , there are samples being held at the factory that may be processed in the future.

I believe the information provided during the term of the EL should provide the extra information you may require.

If I am able to offer any further assistance, please let me know.

Best regards,

John G. Dunn
