NOTE: 1. The Misty Valley Grid was sampled during the 1973-74 summer. The Mt Lindsay Grid was sampled during the 1974-75 summer. The lower limit of detection was different for the two grids. Misty Valley: 50ppm, Mt. Lindsay: 5ppm.

2. The strong anomaly on M11 8000/3000E was not repeatable and was probably due to contamination.
