

- LEGEND**
- Qg - Quaternary glacial and fluvio-glacial deposits.
 - Ewms - Interbedded micaceous sandstone, shale and greywacke. Some with appreciable volcanogenic component. (White Spur Formation)
 - Ewsh - Dominantly black shale/siltstone. (White Spur Formation)
 - Ewvs - Dominantly volcanoclastic 'shard-rich' siltstones. (White Spur Formation)
 - Ewss - Dominantly feldspar > quartz - phyric volcanoclastic sandstones with lesser volcanoclastic siltstones and breccia units (particularly immediately overlying Ewsv). (White Spur Formation)
 - Ewsv - Massive feldspar-phyric pumice breccia and minor lavas. (Central volcanic Complex)
 - Geological boundary
 - Geological boundary - inferred
 - Fault
 - Limits of mapped area
 - / Bedding
