1. APPENDICES

The following Appendices, specifically 1.1 to 1.12 have been prepared from data recovered from archives of Mineral Resources Tasmania. Where applicable those data have been summarised and converted from Imperial to metric units and while every effort has been made to accurately transcribe those data difficulties were encountered in interpreting some of the archived material due to poor data reproduction quality. Readers are urged to conduct their own confirmatory checks of the transcriptions provided in this report.

All data are presented in Excel (XLS) format and the various drilling programs presented as separate worksheets. Each worksheet is prefaced by an information page providing detail of tenement, map sheet and data source.
