

5370 000  
MH

Note Serpentine Hill Complex  
has only been subdivided with regard to gabbros  
Pyroxenites / hornblende / clinopyroxenes were mapped  
as such but are included here under one heading

572 000 ME

- = glacial till
- = basalt/dolerite complex
- = Quartz Tourmaline Rock
- = gabbro portion of Serpentine Hill Complex
- = Polymict breccia
- = line of cross section
- = joint
- = bedding / layering in ultramafics
- = bedding with facing
- = clearance
- = schistosity
- = fault
- = approximate contact
