The conclusions and recommendations expressed in this report represent the opinions of the Authors based upon the data available and provided to them at the time of preparation of this report. While all due care has been taken in preparation of the report, Tamar Gold Ltd and its employees take no responsibility for accidental inclusion/omission of erroneous data, particularly that sourced from previous work on this licence by other parties.

Note: All figures, grids, and contained data are according to the GDA/MGA94 grid system.

ABSTRACT

The Golconda exploration tenement remains highly perspective for gold. Over the past 12 months no field work has been completed on the ground of this tenement, but work has continued here as part of the regional 'Prospectivity Review' being undertaken by Tamar Gold.

The next 12 months will see the continuation of this review with specific targets and work programs for this tenement being proposed.

1.2 Geology Overview

1.2.1 Stratigraphy

The tenement comprises sub- and outcropping Mathinna Supergroup siltstones, sandstones, and subordinate shales. Revision of the internal stratigraphy of the Mathinna Supergroup as detailed in Seymour et al. (2011) and summarized in Table 1 below,

Group	Formation	Member	Age	Brief description
Panama Group	Sideling Sandstone		Early Devonian (plant fossils)	Dominantly fine-grained sandstone, some interbedded siltstone
	Lone Star Siltstone		Late Silurian (graptolites)	Dominantly thin-bedded siltstone with interbedded fine-grained sandstone increasing towards the top
	Retreat Formation		Silurian?	Interbedded turbiditic medium to very fine-grained sandstone and subordinate siltstone-mudstone
	Yarrow Creek Mudstone		Silurian?	Dominantly thin-bedded mudstone, with subordinate cross-laminated siltstone
Inferred faulted unconformable contact				
Tippogoree Group	Turquoise Bluff Slate		Early-Middle Ordovician (graptolites)	Phyllitic dark grey-black slate; recumbent folds and cleavage
		Industry Road Member	Ordovician?	Interbedded phyllitic slate and foliated very fine-grained sandstone; ridge-forming recumbent folds and cleavage
	Stony Head Sandstone		Ordovician?	Graded thick-bedded fine-grained turbiditic sandstone with minor interbedded pelite; large-scale recumbent folds and cleavage

Table 1. Revised Stratigraphy of the Mathinna Supergroup

The regional geology (Figure 2) is dominated by Mathinna Supergroup rocks.

1.2.2 Mineralization

The Target mineralization styles in EL30/2006 are related to the known gold occurrences close to the intrusive contacts between Devonian granodiorite and contact metamorphosed Siluro-Devonian Mathinna Supergroup sandstones. The geology in the tenement area is considered prospective for fracture system hosted and disseminated gold in both the granodiorite and sandstones near the contact.

There is sufficient encouragement in the results from the Prospectivity Review undertaken by Tamar Gold Ltd to support new programs to test these aims.

2. CURRENT WORK

Exploration tenement EL53/2010 has been included in the current 'Prospectivity Review' currently being completed by Tamar Gold. No active exploration has taken place on this tenement in the past 12 months, and consequently relinquishment of this ground is appropriate for this tenement.

3. PROPOSED EXPLORATION

On the completion of the Regional Prospectivity review, specific areas will be targeted for further exploration.

4. ENVIRONMENT

The company has environmental policies in place, including compliance with the Mineral Exploration Code of Practice, which minimise the impact that exploration activities have on the environment. The policies include guidelines on how to reduce the risk of spreading plant diseases and weeds as a result of day-to-day exploration.

5. EXPENDITURE

13 th June 2011 – 12 th June 2012		
Geoscientific Costs	Prospectivity Review	3206
	Geochemistry	
	Geophysics	
	Remote Sensing	
Drilling & Gridding Costs	Gridding	
	Drilling	
	Land Access Costs	
	Rehabilitation Costs	
	Feasibility Study Costs	
	Other Costs	214
	Admin Costs	1293
	Total - eligible	4714
