FINAL REPORT

RETENTION LICENCE RL 1/2004 AT RINGAROOMA RIVER AT HERRICK

We refer to your Email received Wednesday October 16th 2013.

Works carried out on retention licence RL 1/2004 included cleaning of disused tracks made by miners in the sixties and seventies to gain access to the lower section of the licence.

We did consider a bulk sampling exercise but due to the extensive work that would have to be undertaken plus creek crossings to make the tracks suitable for heavy earthmoving equipment and support vehicles and the danger of falling huge trees in windy weather along the entire length we considered it would be uneconomical to pursue this lower section as indicated in previous correspondence and maps.

The area was tested by hand methods at strategic locations along the entire length and the grades varied between .3 kg per metre to 1.5 kg per metre of select material. There are pockets with grades of 2.5 kg per metre but these are rare. Some gold was evident.

Yours sincerely,

A handwritten signature in cursive script, appearing to read 'Darrell Fisher'.

Darrell Fisher,
D & J Fisher P/L.
