- LATE DEVONIAN-EARLY CARBONIFEROUS GRANITE ALTERATION**  
 Quartz tourmaline schorl rock, layered bands, veins and nodules of black tourmaline and quartz-tourmaline in granite, veins & thin fracture linings of tourmaline in Luina Group rocks. Alteration straddling the granite-Luina Group contact.
- LATE DEVONIAN-EARLY CARBONIFEROUS MEREDITH GRANITE**  
 Feldspar, feldspar-quartz porphyritic biotite granite +/- tourmaline, minor aplite increasing towards Luina Group contact.
- EARLY CAMBRIAN LUINA GROUP**  
 Partly hornfelsed; dark grey, variably magnetic mafic siltstone, grey mudstone-siltstone, brown oxidised sandstone (north-east sector), cream, red-brown chert, orthoquartzite (west sector).
