

DRILL RECORD				GEOLOGICAL LOG			GEOLOGICAL SECTION		ASSAY RESULTS							
Date	From	To	Core Recov.	From	To	Description	Core	Sample	Sample No.	From	To					
1958		100'	N11	98'		Continues in clay and decomposed "amphibolite-schist". No core. Sludge still uniform brown, of clay and decomposed country rock.										
	100'															
		108'	N11													
	108'															
		120'	N11													
	120'															
					123'											
				123'		Slight change in sludge colour to a lighter brown. Ground somewhat harder.										
		130'	N11		130'											
30/1	130'	131'	2"	130'	131'	Very soft, highly decomposed amphibolite-schist. Fine grained schistosity 45° to core axis. Iron-stained but no indication of magnetite or pyrite.										
	131'															
		135'	N11		135'											
	135'				135'	Amphibolite-schist as above, becoming progressively less weathered.										
		145'	1" 2"		145'	Quartz veinlets at 144'										
	145'				145'	Amphibolite-schist as above slightly less weathered										
					146'											
					146'	Clay and very soft amphibolite-schist (weathered)										
		155'	6"		155'
