

DEPTH	STRATIGRAPHIC DESCRIPTION
70-75	<u>Sand</u> , light brown, clear, very fine to medium grained, sub-angular, poorly sorted quartz, very dirty, common light brown silty interstitial material, rare carbonaceous specks.
75-80	<u>Silty sand</u> , light grey, clear, white, very fine to coarse grained, sub-angular to sub-rounded, poorly sorted quartz, very dirty, common white and light brown silty interstitial material, scattered pebbles up to 1/8" diameter of quartz, loosely compacted.
80-85	<u>Silty sand</u> , as 75-80 above, except less pebbles.
85-90	<u>Sand</u> , light brown, clear, fine to coarse grained, sub-angular to sub-rounded, poorly sorted quartz, fairly clean, scattered white and light brown silty interstitial material, rare minute carbonaceous specks, scattered pebbles, up to 1/8" of sub-rounded quartz.
90-95	<u>Silt</u> , light grey, coarsely textured, moderately to loosely compacted, scattered pebbles of clear and glassy and white quartz, up to 1/4" diameter. One large water-worn pebble of light grey indurated claystone containing inclusions of dark brown material
95-100	<u>Silt</u> , white to light grey, medium textured, loosely to moderately compacted, common very finely divided carbonaceous specks.
100-105	<u>Sandy silt</u> , light brown, coarsely textured, loosely compacted, scattered to rare finely divided carbonaceous specks, scattered fine to coarse quartz grains.
105-110	<u>Sandy silt</u> , light grey, clear, finely grained quartz set in white and light grey silty matrix, rare carbonaceous specks, scattered coarse grains of white and clear quartz.
110-115	<u>Sandy silt</u> , as 105-110 above.
115-120	<u>Sand</u> , clear, smokey, grey and brown, and white, occasional orange, very coarsely grained, sub-angular to sub-rounded, poorly sorted quartz, fairly clean, scattered white and light brown silty and very finely grained sandy interstitial material, rare minute carbonaceous nodules and fragments, loosely compacted, occasional frosted quartz pebbles, rare quartz grains with yellowish orange staining.
120-125	<u>Sand</u> , as 115-120 above.
125-130	<u>Pebbly sand</u> , clear, brown, smokey, orange and white, fine to very coarse grained, sub-angular to sub-rounded, poorly sorted quartz, very dirty, common brown silty and clayey interstitial material rare to scattered carbonaceous fragments, occasional brown and orange clay pebbles, loosely compacted.
130-135	<u>Pebbly sand</u> , clear, white, grey and brown, smokey, very coarsely grained to pebbly, sub-angular to sub-rounded, medium sorted quartz, clean, rare to scattered white, light brown and, sometimes, yellow clayey and silty interstitial material, occasional grains of black and white igneous rock, occasional yellow staining.
