Drilling Record Sheets

Page 5

Project: EL 7/68 Montezuma Co-ords. Collar: 47.5N/2.1E  
+0.3S Drill: LY 5  
Hole No: Mzn 3 (DDH) Bearing: 255°T Bit Size:  
R.L. Site: Line approx. Depression: 60° Core Size: NQ/BQ  
2080' ASL Geologist: DK Sampler: Date Logged: 15/2/73

From m	To m	Length Run Core	% Rec.	Sludge Wt.	No.	Assay Value	Summary Geological Log
114.30	116.74	2.31		about 45° c/a.			
				<u>From 83.73-84.59m</u> , Quartzite shows the typical			
				banding.			
116.74	119.86	3.10		<u>From 85.65-85.90m</u> , Slate, black.			
				<u>87.07-88.00m</u>			
119.86	122.92	3.14		Disturbed/sheared, brecciated slate and			
				quartzite, in filled with white quartz and			
122.92	126.03	2.97		siderite. Fault at 87.07m. Minor Pyrite.			
				<u>88.00-90.92m</u>			
126.03	126.33	0.37		Quartzite, light grey with thin slate bands			
				minor brecciated zone @ 88.24m			
126.33	129.39	3.17		<u>90.92m-92.67m</u>			
				Slate, black with small quartzite bands,			
129.39	132.89	3.60		<u>92.67-94.44m</u>			
				Slatey quartzite medium to dark grey.			
132.89	135.94	3.05		<u>94.44m-95.24m</u>			
				Quartzose slate black, folded, and disturbed.			
135.94	136.86	0.95		<u>95.44-103.75m</u>			
				Slatey quartzite medium to dark grey. Dis-			
				turbed zones of small folds and faults.			
				<u>103.75-103.80m</u>			
				Pyrite pod.			
				<u>103.80-110.13m</u>			
				Slate, black, thin			< 2mm white dolomite
