From	To	Length Run Core	% Rec.	Sludge Wt.	No.	Assay Value	Summary Geological Log
							107.08-108.25m (350.8'-354.00'): Quartzite, light grey.
							108.25-138.68m (354.0'-454.0'): Alternating laminae and bands of dark grey to black slate and quartzite. Banding in general <1mm but zones of both slate and quartzite up to 0.3m in places and also minor sphal- erite. One zone of massive pyrite is devel- oped. At 113.00m for 0.1m massive pyrite with quartzite. At 114.27m; 0.01m wide vein of pyrite and galena. At 115.55m; 0.02m wide siderite vein with a spec of chalcopryite. At 116.22 for 0.15m coarsely disseminated pyrite in quartzite. From 116.37-116.78m; black slate with stringers of milky quartz. At 116.88 for 0.02m Quartzite with pyrite. At 118.43; 0.5cm vein of siderite, sphalerite pyrite with spec of chalcopryite. From 120m-125.46m; pyrite gradually increases in quantity with over 40 veins (<1mm)
