

To: Comalco Limited

9 December 1975

The technical programme would comprise a laboratory experimental study of the dependence of fluoride recovery from the two ores on the level of reagent addition, on fineness of grind and on reaction temperature and time. A larger (1 kg) scale test would be included.

The estimated fee for this programme is \$5,000. We realise that your company may wish to know more of the technical details of the process before committing itself to supporting this proposed work. If so, we suggest a round-table discussion here in Adelaide, and would then ask you to sign an agreement to maintain confidentiality until you are actually supporting the programme at Amdel. We trust you will understand our position, as we have invested our own, very limited, resources until now.

If you accept our proposal, the project would be carried out under the Standard Conditions of Contract which are included and form part of this Proposal.

If the experimental results are sufficiently promising we can make a preliminary estimate of capital and operating costs as Stage II. We look forward to receiving your reply.

Yours faithfully,
The Australian Mineral Development
Laboratories

for F.R. Hartley
Director.
