To: Comalco Limited

15 December 1975

We wish to point out that the project may be eligible for assistance from the Australian Industrial Research and Development Grants Board and Amdel is an approved research organisation according to the Board's regulations. However, as Amdel is not an agent for the Board, applications should be made directly to:

The Executive Officer,
Australian Industrial Research and Development Grants Board,
PO Box 4009,
CANBERRA. ACT 2601

As you are aware, all investigations at Amdel are strictly client confidential. However, provided the client consents it is our practice to inform Amdel Council of the client's name and the project title and value. Beyond that disclosure the project and its results and recommendations remain strictly confidential.

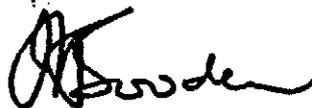

A 10 kg sample of typical Moina fluorite ore should be supplied for the investigation.

Our Mr W.G. Rogers was responsible for the Mount Garnet investigation and will be available to undertake the proposed Moina work. Mr Rogers will be on leave from 25 December 1975 to 15 January 1976. Provided your official authorisation and the required sample have been received by 18 January, work can begin on that date.

The proposed work will require approximately five weeks to complete.

We look forward to receiving your comments on the above proposals.

Yours faithfully,
The Australian Mineral Development
Laboratories

for F.R. Hartley
Director.
