Exploration Department,
P.O. Box 691,
DEVONPORT. TAS. 7310.

22nd November, 1976.

Mr. H.K. Wellington,
Chief Metallurgist,
Department Mines,
Wellington Street,
LAUNCESTON. TAS. 7350.

Dear Mr. Wellington,

Attached are analyses from our laboratory for the head sample R731
(fluorite skarn).

They agree well with Andel's previous analyses, except our lab reports
lower W values. Note that Andel reports analyses as $\text{CaF}_2\%$ and our lab
as F% - doubling the F% gives a close approximation to $\text{CaF}_2\%$.

Yours sincerely,

P.W. Askins.
