

A total of 215 holes were completed for a total depth of 303.4 metres, an average depth of 1.4 metres per hole.

- 4.2 kilometres of Dipole - Dipole I.P. survey.
- 4.6 kilometres of magnetometer survey.
- 1.0 kilometre of Schlumberger vertical electrical sounding.
- 2.6 kilometres of V.L.F. (E.M.) survey.
- 1.4 kilometres of S.P. survey.

Voyager 3. Area

- 12.6 kilometres of theodolite gridding.
- geological mapping and rock sampling at 1:5,000 scale.
- C-horizon auger sampling for geochemical purposes at 50 metre centres along the grid traverses. A total of 233 holes were completed for a total depth of 451.60 metres, and average depth of 1.94 metres per hole.
- 11.15 kilometres of Dipole - Dipole I.P. survey.
- 12.0 kilometres of magnetometer survey.
- 2.0 kilometres of Schlumberger vertical electrical sounding.

Voyager 8. Tin Study Area.

- 34 auger holes were completed for a total of 162 samples and 241 metres.
- 3 pits were hand dug for a total of 8.1 metres and 19 bulk samples.
- 45.5 metres of hand dug trenching was completed for 6 bulk samples.
- 2500kg of samples were panned, including soil, dune and stream sediment samples.
- 35 square kilometres of geological mapping at 1:10,000 scale.
- 10 work sites were theodolite leveled.
