COMMENTS

Most of these rocks can be classified in terms of the rock groupings and nomenclature outlined in previous report 2228, and indeed directly compared with previously described samples (and photomicrographs of them presented as figures which accompany report 2228). These comparisons are as follows:-

1. "Porphyries"

<u>In this suite</u>	<u>Report 2228</u>
3344	1117 (fig. 46)
3442	1284 (fig. 21)

2. "Rhyolitic (and porphyritic) lavas"

1424	3141 (fig. 22)
3300	1276 (fig. 11)
3606	1276 (figs. 11 to 14)

3. Tuff-lavas

3619 distinctly ignimbritic affinities	1188 (figs. 31, 32)
? 3350)	3155 (fig. 23)
? 3405)	1302 (fig. 28)
? 3447)	
? 3479)	1228 (fig. 1)
